

ASSIGNMENT 14: Create an Elastic IP for an Instance.

Step 1: Go to the instance and Note the Public IPv4 Address.

The screenshot shows the AWS Management Console for the 'Instances' page. The instance 'G7_DS' (ID: i-058ea959ea83e956c) is in a 'Running' state. The 'Public IPv4 address' is 13.203.194.114. The 'Public IPv4 DNS' is ec2-13-203-194-114.ap-south-1.compute.amazonaws.com.

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS	Public IPv4 ...	Elastic IP
G7_DS	i-058ea959ea83e956c	Running	t2.micro	Initializing	View alarms +	ap-south-1b	ec2-13-203-194-114.ap...	13.203.194.114	-

Instance summary

Instance ID: i-058ea959ea83e956c

Public IPv4 address: 13.203.194.114 | open address

Private IPv4 addresses: 172.31.11.23

Public IPv4 DNS: ec2-13-203-194-114.ap-south-1.compute.amazonaws.com

Step 2: Now Under 'Instance State', Click on 'Stop Instance' and you will notice that the Public IPv4 Address gets blank.

The screenshot shows the AWS Management Console for the 'Instances' page. The instance 'G7_DS' (ID: i-058ea959ea83e956c) is in a 'Stopped' state. The 'Public IPv4 address' is blank. The 'Public IPv4 DNS' is blank.

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS	Public IPv4 ...	Elastic IP
G7_DS	i-058ea959ea83e956c	Stopped	t2.micro	Initializing	View alarms +	ap-south-1b	-	-	-

Instance summary

Instance ID: i-058ea959ea83e956c

Public IPv4 address: -

Private IPv4 addresses: 172.31.11.23

Public IPv4 DNS: -

Step 3: Now again Under 'Instance State', Click on 'Start Instance'. You will notice that the Public IPV4 Address has changed.

The screenshot shows the AWS Management Console for the 'Instances' page. The instance 'G7_DS' (ID: i-058ea959ea83e956c) is in a 'Running' state. The 'Public IPv4 address' is 13.232.134.195. The 'Public IPv4 DNS' is ec2-13-232-134-195.ap-south-1.compute.amazonaws.com.

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS	Public IPv4 ...	Elastic IP
G7_DS	i-058ea959ea83e956c	Running	t2.micro	Initializing	View alarms +	ap-south-1b	ec2-13-232-134-195.ap...	13.232.134.195	-

Instance summary

Instance ID: i-058ea959ea83e956c

Public IPv4 address: 13.232.134.195 | open address

Private IPv4 addresses: 172.31.11.23

Public IPv4 DNS: ec2-13-232-134-195.ap-south-1.compute.amazonaws.com

Step 4: Now under 'Network and Security', click on 'Elastic IPs'. Click on 'Allocate Elastic IP address'.

The screenshot shows the AWS Management Console for the 'Elastic IP addresses' page. There are no Elastic IP addresses found in this Region.

Name	Allocated IPv4 addr...	Type	Allocation ID	Reverse DNS record	Associated instance ID	Private IP address
------	------------------------	------	---------------	--------------------	------------------------	--------------------

Step 6: Now click on 'Allocate'.

The screenshot shows the AWS Management Console for the 'Allocate Elastic IP address' page. The 'Public IPv4 address pool' is set to 'Amazon's pool of IPv4 addresses'. The 'Network border group' is set to 'ap-south-1'.

Elastic IP address settings

Public IPv4 address pool

- Amazon's pool of IPv4 addresses
- Public IPv4 address that you bring to your AWS account with BYOIP. (option disabled because no pools found) [Learn more](#)
- Customer-owned pool of IPv4 addresses created from your on-premises network for use with an Outpost. (option disabled because no customer owned pools found) [Learn more](#)
- Allocate using an IPv4 IPAM pool (option disabled because no public IPv4 IPAM pools with AWS service as EC2 were found)

Network border group: ap-south-1

Global static IP addresses

AWS Global Accelerator can provide global static IP addresses that are announced worldwide using anycast from AWS edge locations. This can help improve the availability and latency for your user traffic by using the Amazon global network. [Learn more](#)

[Create accelerator](#)

Tags - optional

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

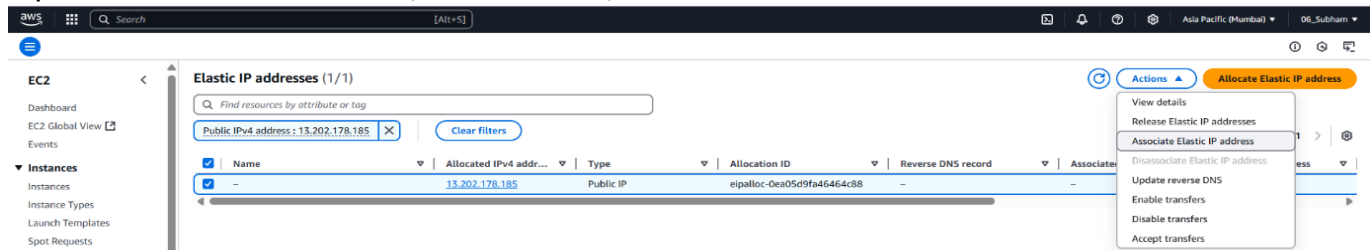

No tags associated with the resource.

[Add new tag](#)

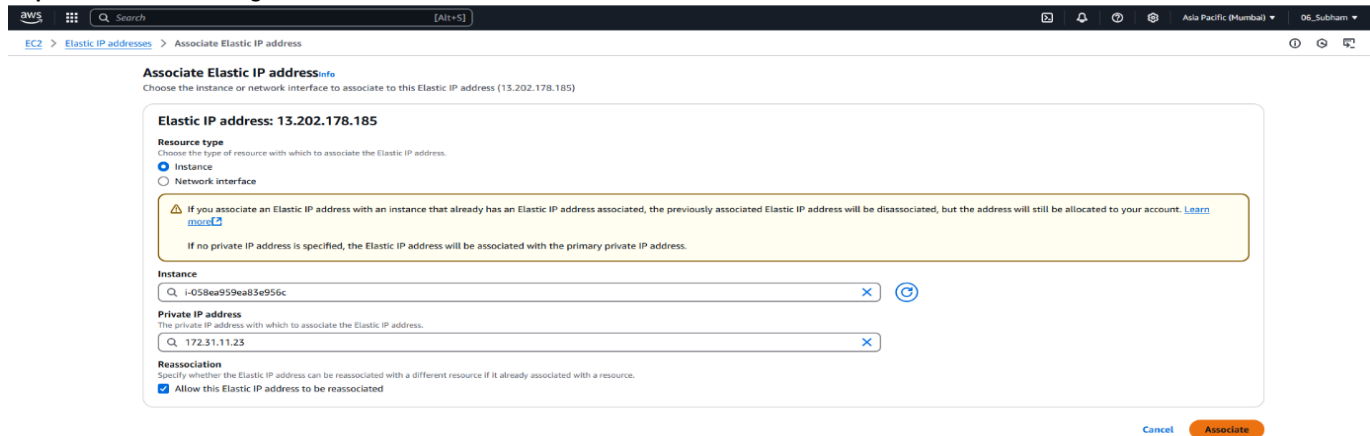

You can add up to 50 more tag

[Cancel](#) [Allocate](#)

Step 7: Now select the **'Elastic IP Address'**, under the **'Actions'**, click on **'Associate Elastic IP address'**.

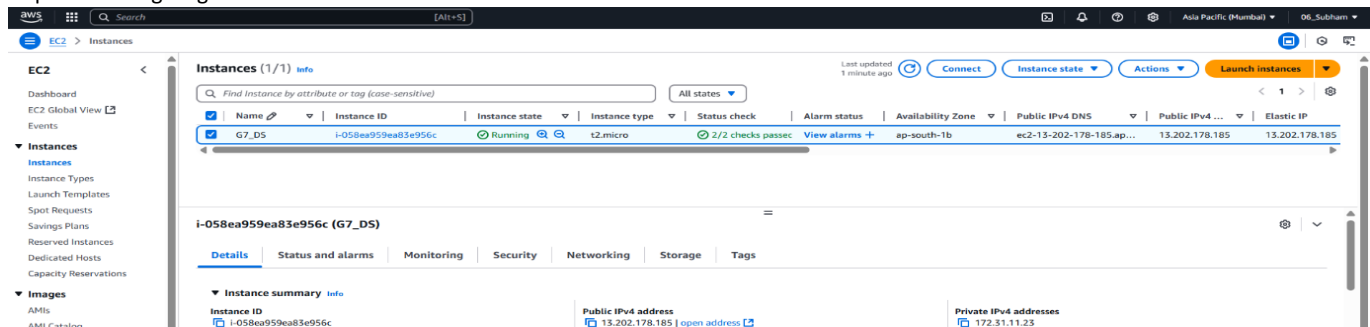

Step 8: Select the **'running instance'** and **'Private IP Address'** and click on **'Associate'**.

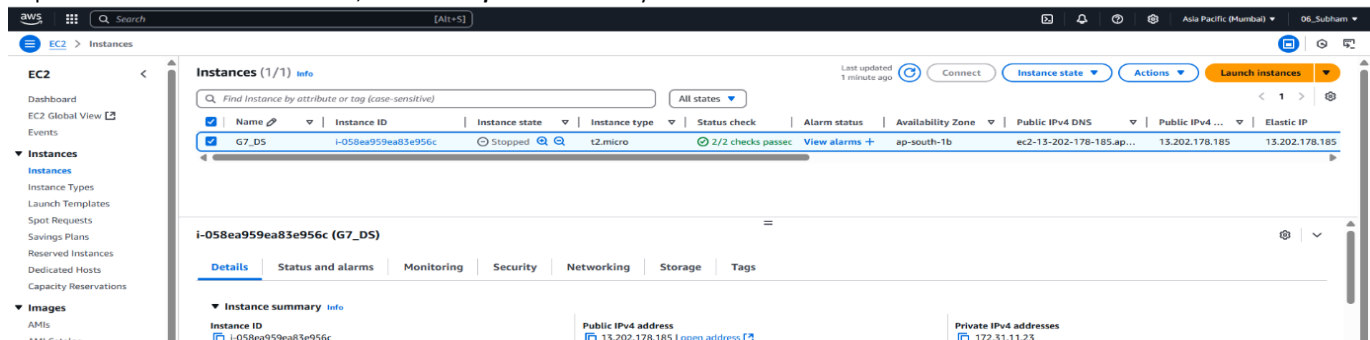

Step 9: The Instance ID is now Associated with the Elastic IP.

Step 10: Now again go to the Instance and Note the Public IPv4 Address.

Step 11: Now Under **'Instance State'**, click on **'Stop Instance'** and you will notice that the Public IPv4 Address remains same.

Step 12: Now again Under Instance State, Click on Start Instance. You will notice that the Public IPV4 Address remains same.
