

ASSIGNMENT 6 : Upload a Static Website on S3.

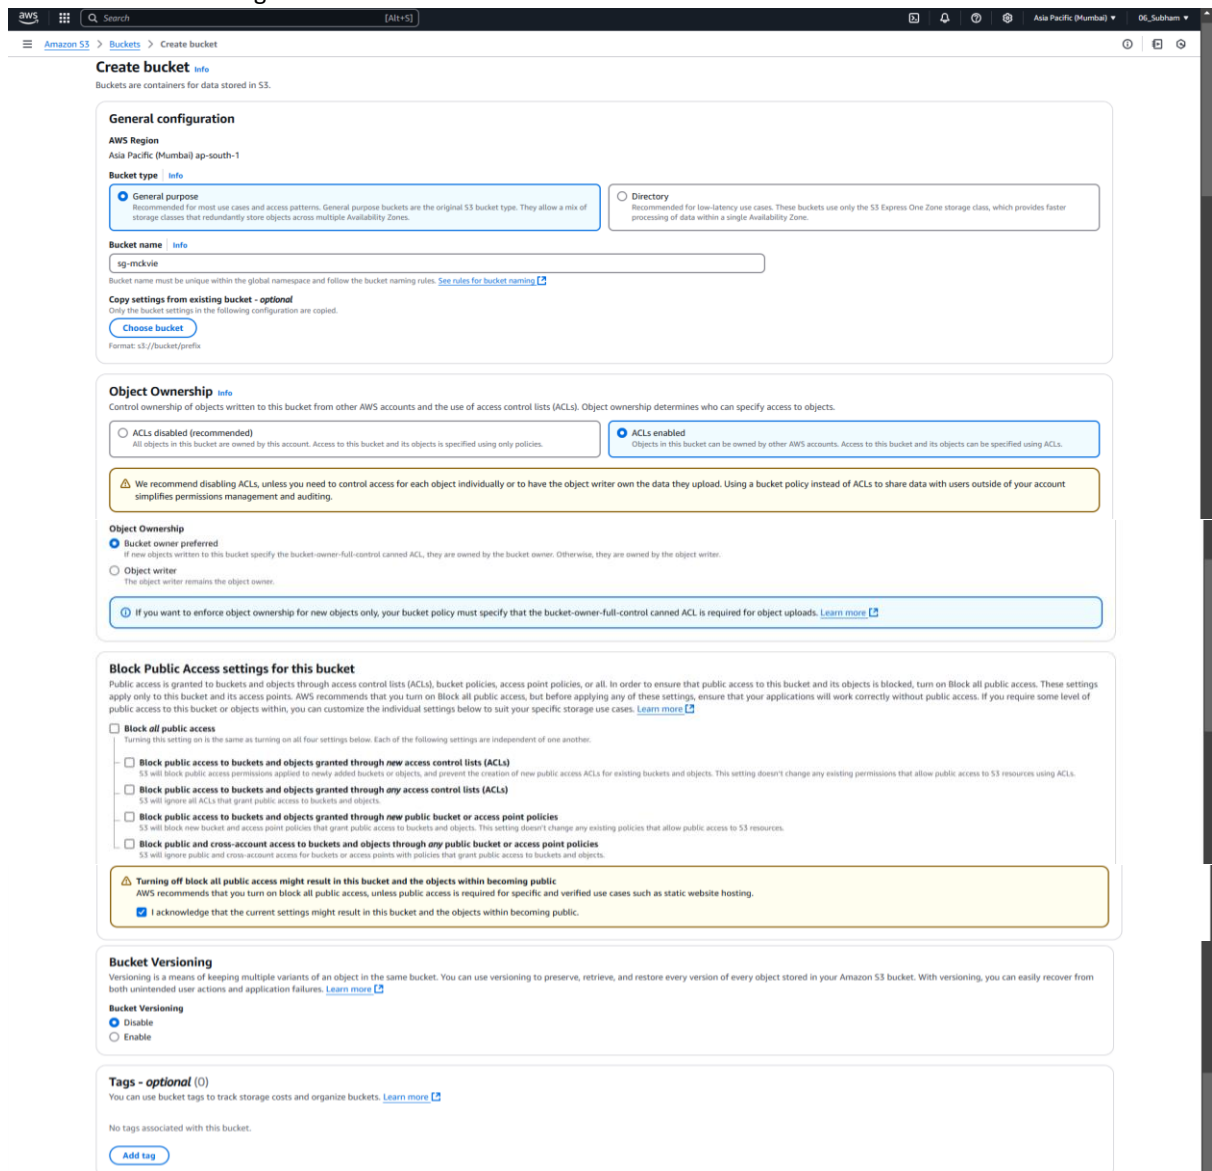

Step 1: After login into the account, search for S3 in the search bar and click on it.

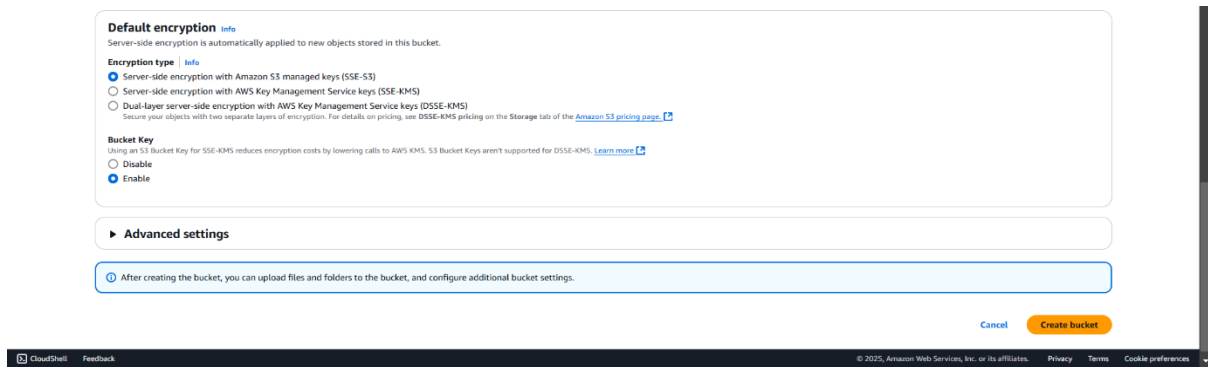

Step 2: Click on Create Bucket.

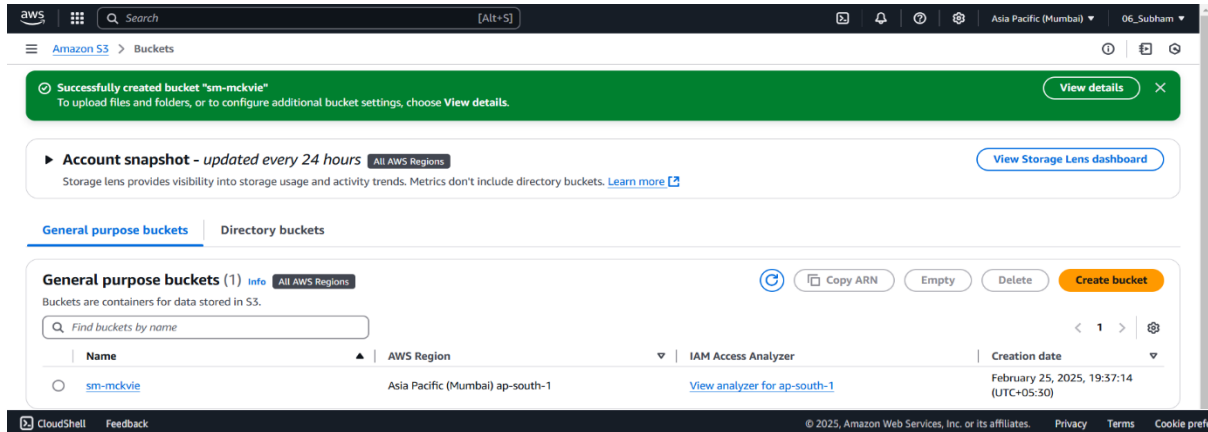

Step 3: Give the Name of the bucket as per the naming rules and click on ACLs enabled option. Unblock the public access and tick the acknowledgement checkbox and click on Create Bucket.

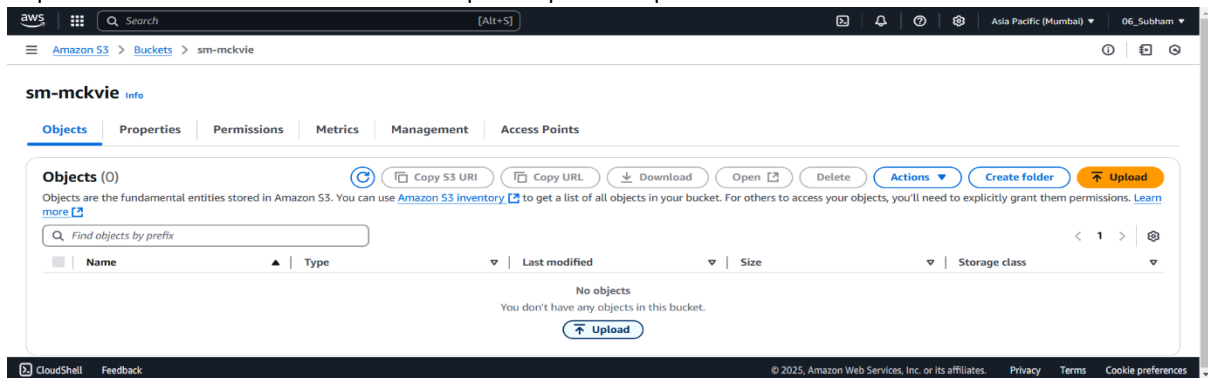

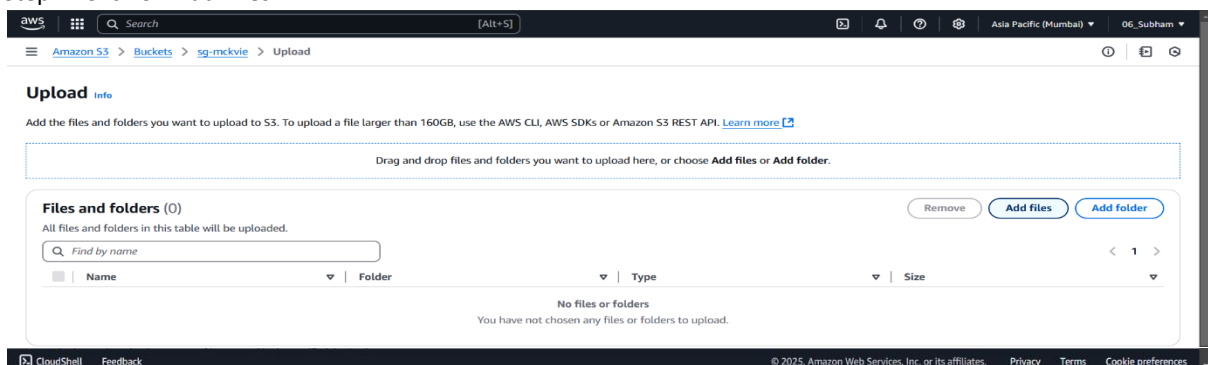

Step 5: The Public Bucket is created successfully.

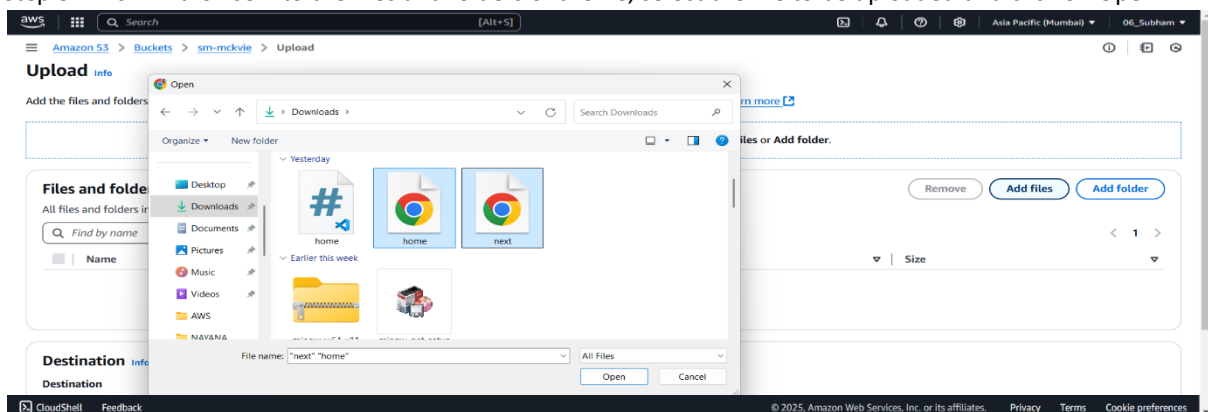

Step 6: Click on the bucket and select the upload option to upload a file.

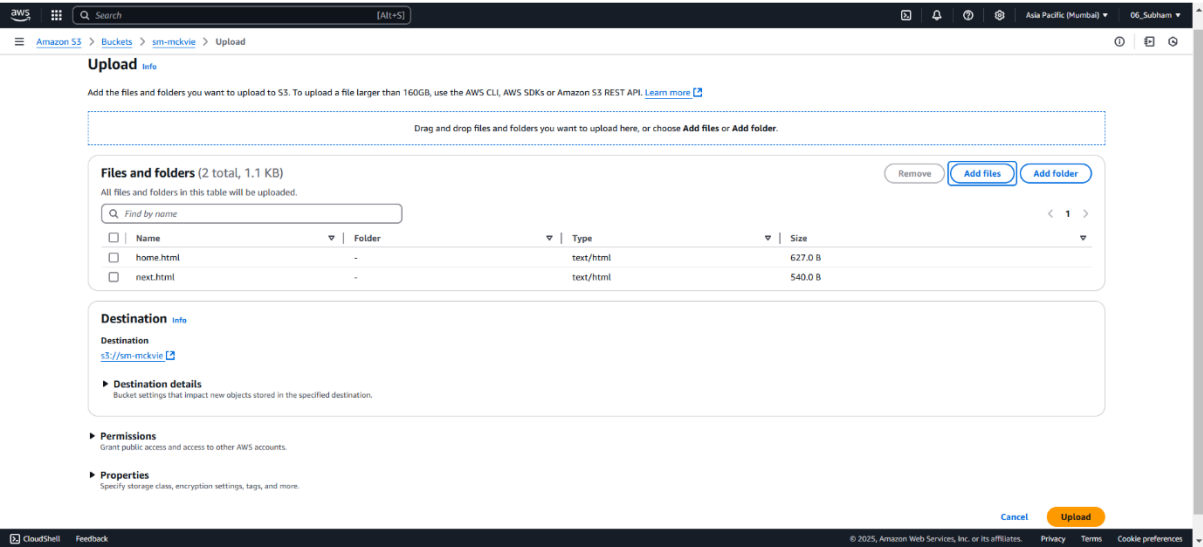

Step 7: Click on Add Files.

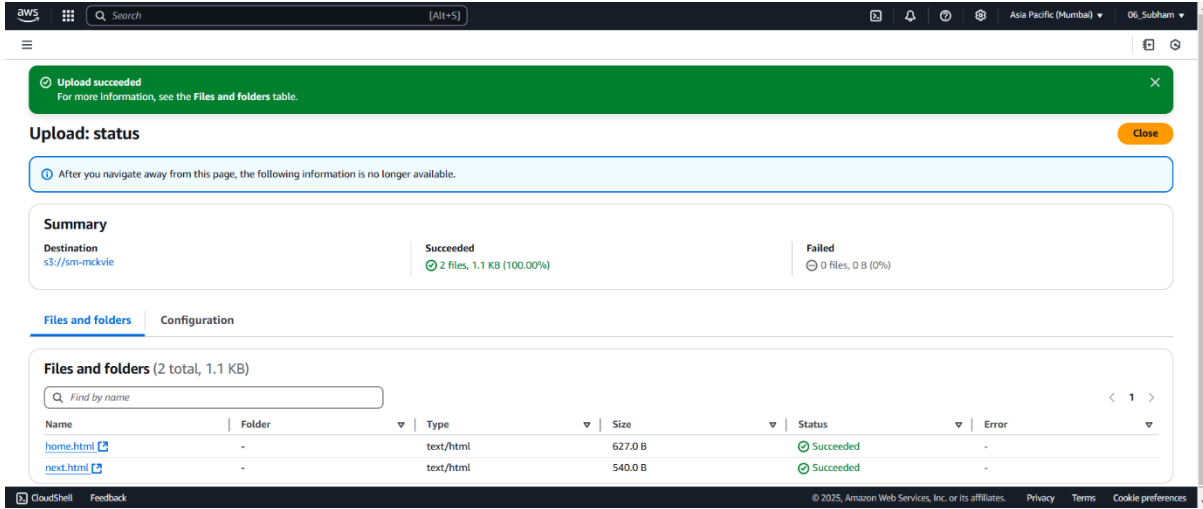

Step 8: This will browse into the files and folders of the PC, select the file to be uploaded and click on Open.

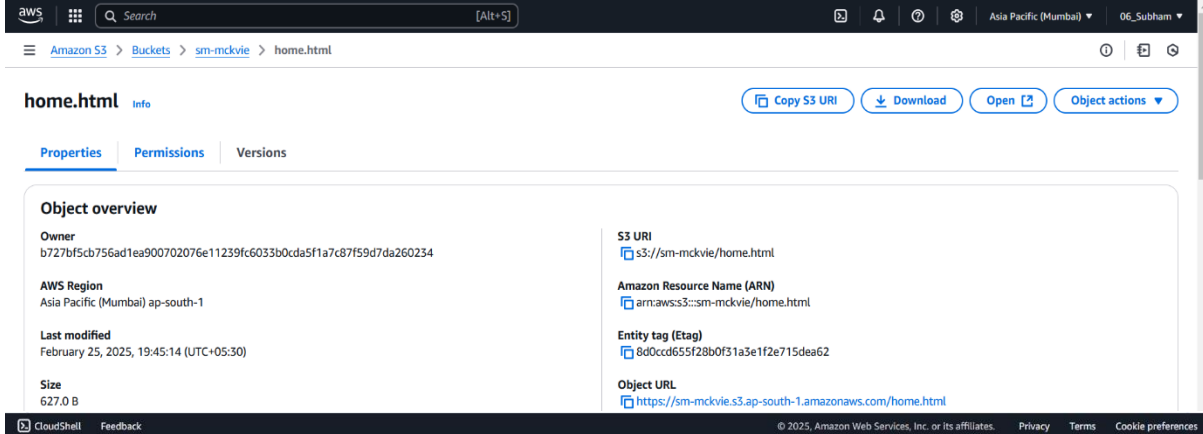

Step 9: Then click on Upload.

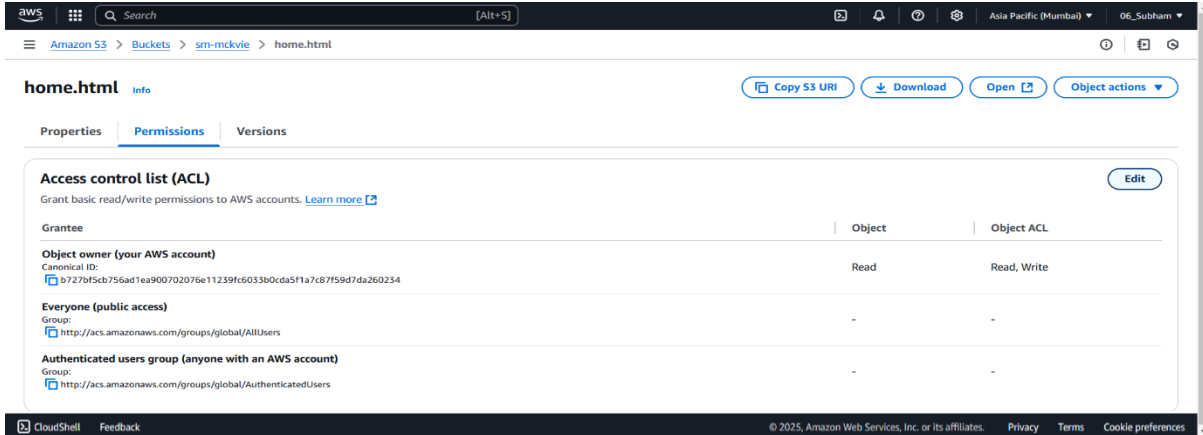

Step 10: The file is uploaded successfully and the status of the file is also visible.

Step 11: Now, click on the home.html file and then click on Permissions.

Step 12: Here, click on Edit.

Step 13: Allow the Read Public Access of Objects and Object ACL for Everyone and click on Save Changes.

The screenshot shows the 'Edit access control list' page for the 'home.html' object in the 'sm-mckvie' bucket. The 'Access control list (ACL)' section shows that the 'Object owner (your AWS account)' has 'Read' permissions. The 'Everyone (public access)' group has 'Read' permissions. The 'Authenticated users group (anyone with an AWS account)' has 'Read' permissions. The 'Object ACL' section shows that 'Read' and 'Write' permissions are granted to 'Everyone (public access)'. A warning message states: 'When you grant access to the Everyone or Authenticated users group grantees, anyone in the world can access this object.' The 'Access for other AWS accounts' section shows 'No other AWS accounts associated with the resource.' The 'Specified objects' table lists the 'home.html' object with a size of 627.0 B.

Name	Type	Last modified	Size
home.html	html	February 25, 2025, 19:45:14 (UTC+05:30)	627.0 B

Step 14: Now, click on the next.html file and then click on Permissions.

The screenshot shows the 'next.html' object page. The 'Object overview' section displays the 'Owner' (b727bf5cb756ad1ea900702076e11239fc6033b0cda5f1a7c87f59d7da260234), 'AWS Region' (Asia Pacific (Mumbai) ap-south-1), 'Last modified' (February 25, 2025, 19:45:14 (UTC+05:30)), and 'Size' (540.0 B). The 'S3 URI' is 's3://sm-mckvie/next.html'. The 'Amazon Resource Name (ARN)' is 'arn:aws:s3::sm-mckvie/next.html'. The 'Entity tag (Etag)' is 'c289c645d818056a1fedf000d9ea0'. The 'Object URL' is 'https://sm-mckvie.s3.ap-south-1.amazonaws.com/next.html'.

Step 15: Under the Edit option, Allow the Read Public Access of Objects and Object ACL for Everyone and click on Save Changes.

The screenshot shows the 'Edit access control list' page for the 'next.html' object. The 'Access control list (ACL)' section shows that the 'Object owner (your AWS account)' has 'Read' permissions. The 'Everyone (public access)' group has 'Read' permissions. The 'Authenticated users group (anyone with an AWS account)' has 'Read' permissions. The 'Object ACL' section shows that 'Read' and 'Write' permissions are granted to 'Everyone (public access)'. A warning message states: 'When you grant access to the Everyone or Authenticated users group grantees, anyone in the world can access this object.' The 'Access for other AWS accounts' section shows 'No other AWS accounts associated with the resource.' The 'Specified objects' table lists the 'next.html' object with a size of 540.0 B.

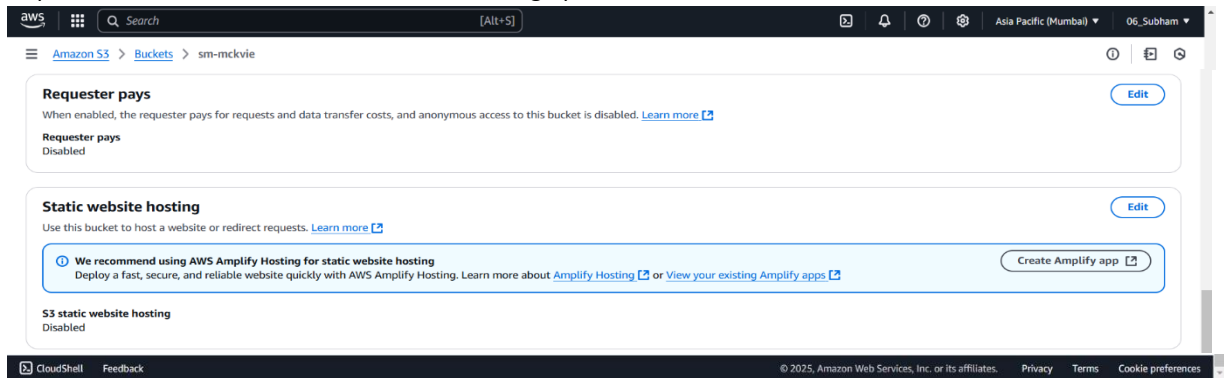

Name	Type	Last modified	Size
next.html	html	February 25, 2025, 19:45:14 (UTC+05:30)	540.0 B

Step 16: Now go to the bucket and click on Properties.

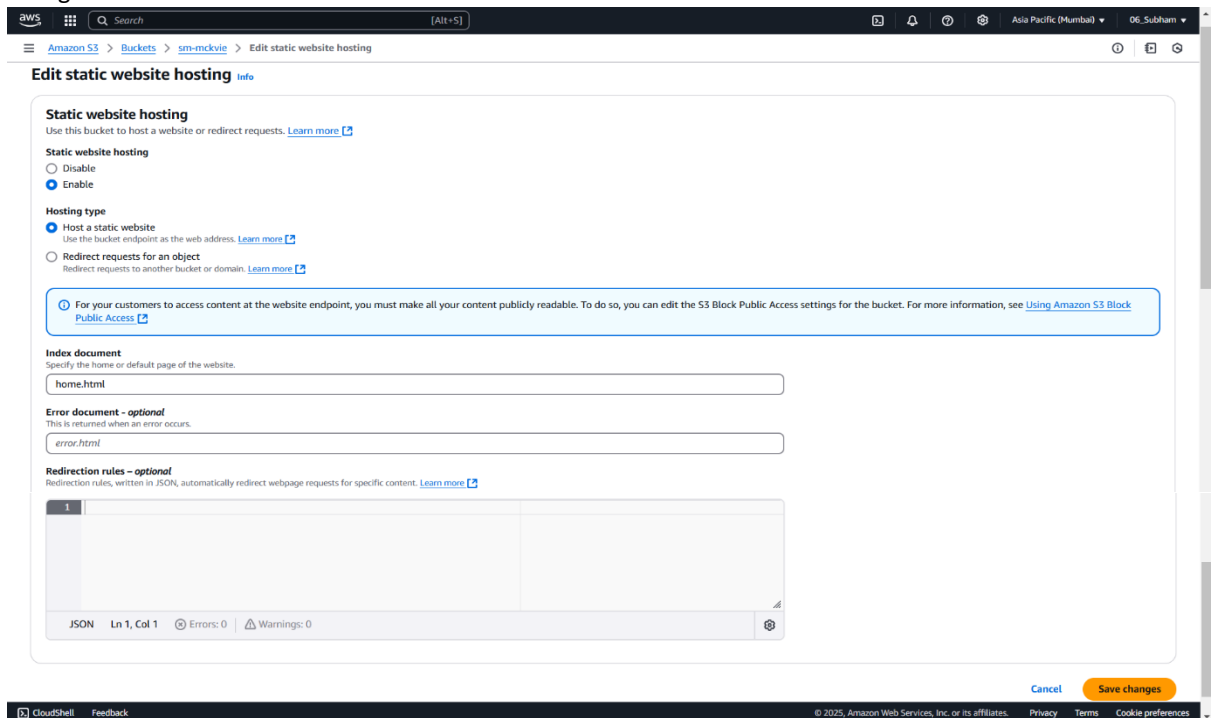

The screenshot shows the 'sm-mckvie' bucket 'Properties' page. The 'Objects (2)' section displays a list of objects: 'home.html' and 'next.html'. The 'home.html' object has a size of 627.0 B and is stored in the 'Standard' storage class. The 'next.html' object has a size of 540.0 B and is stored in the 'Standard' storage class.

Name	Type	Last modified	Size	Storage class
home.html	html	February 25, 2025, 19:45:14 (UTC+05:30)	627.0 B	Standard
next.html	html	February 25, 2025, 19:45:14 (UTC+05:30)	540.0 B	Standard

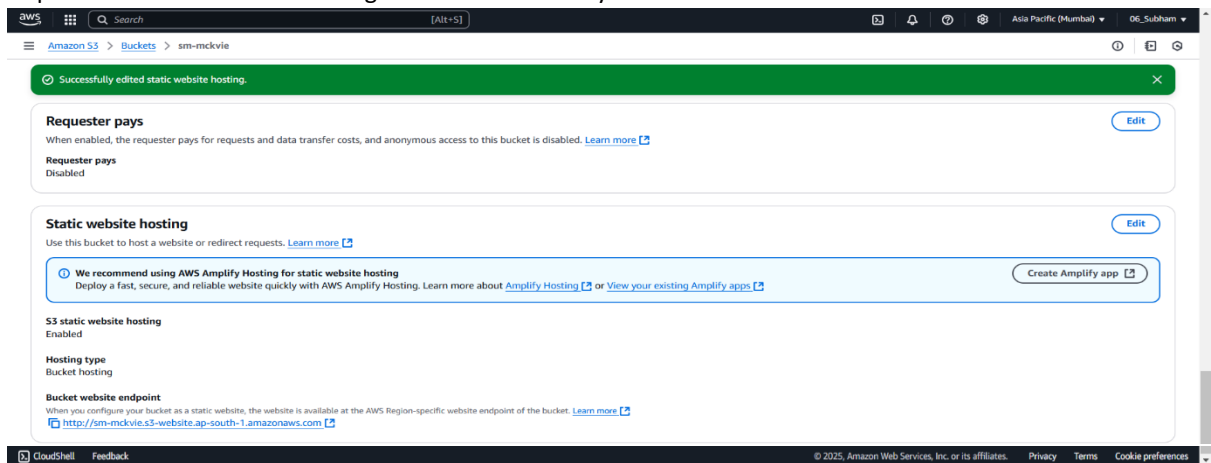

Step 17: Scroll down to the Static Website Hosting option and click on Edit.

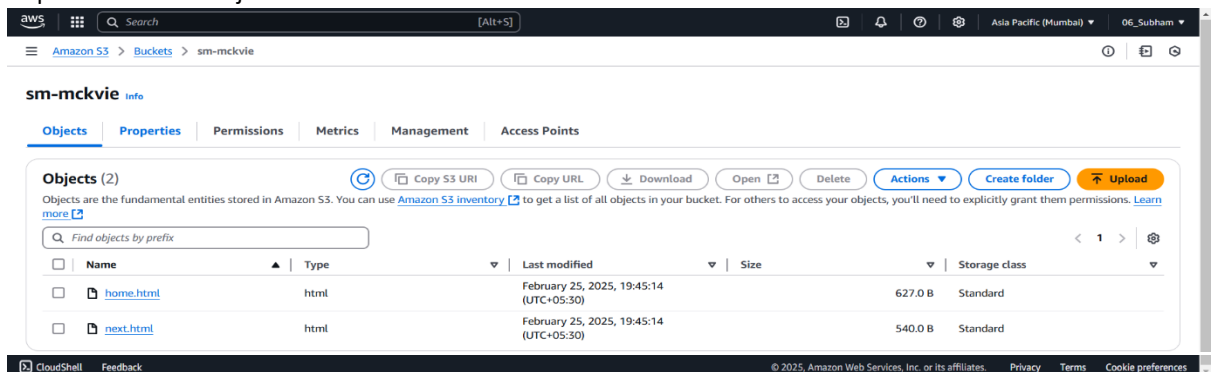

Step 18: Enable the Static Website Hosting and enter the name of the default page of the website and click on Save Changes.

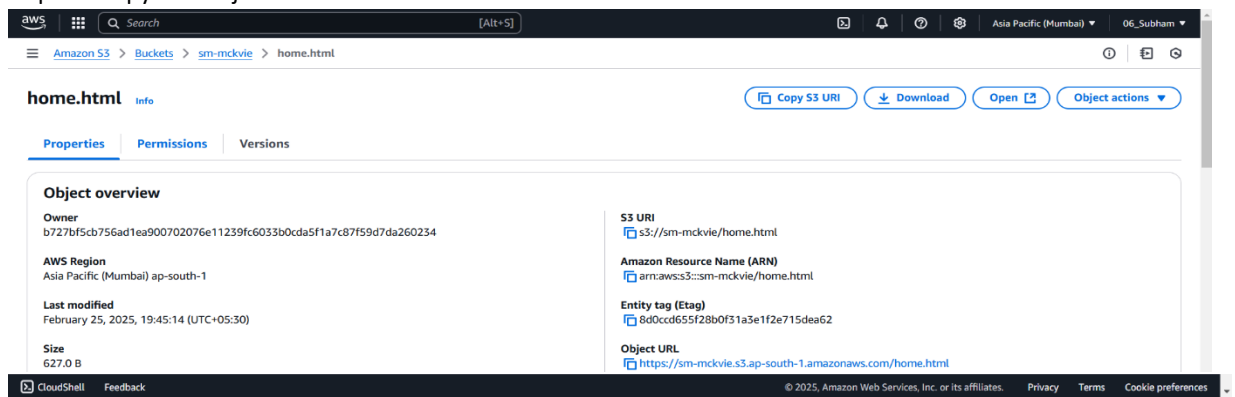

Step 19: The static website hosting is edited successfully.

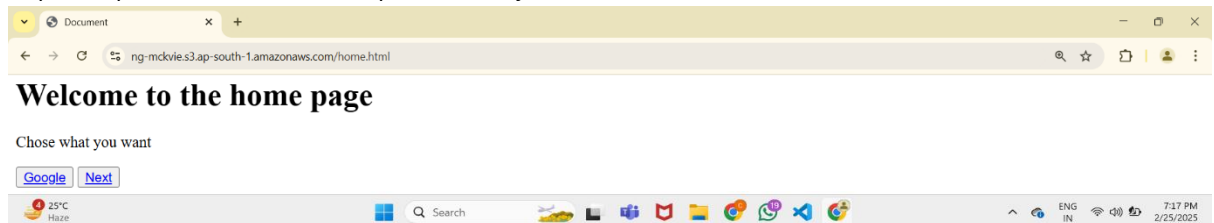

Step 20: Go to the Objects section of the bucket and click on home.html

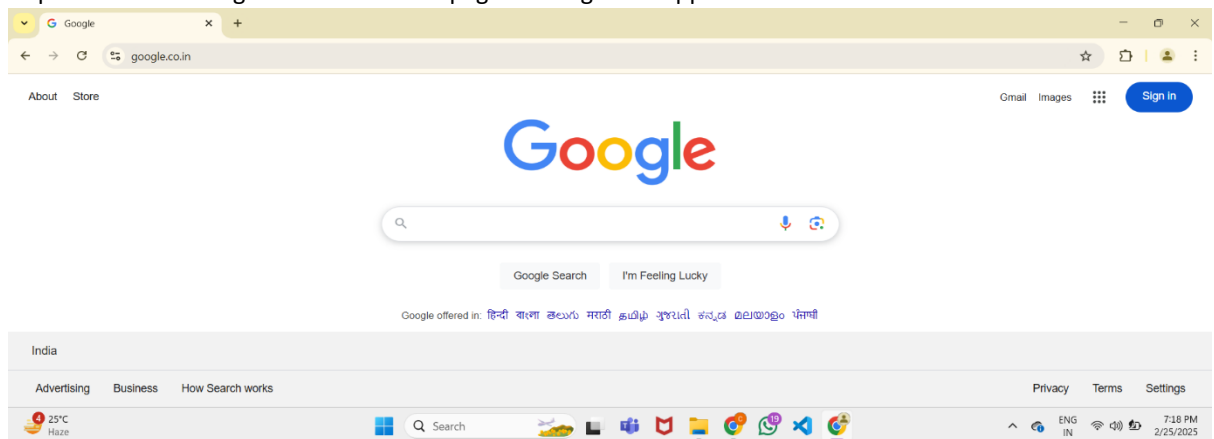

Step 21: Copy the Object Url of home.html

Step 22: Open a new Window and paste the Object URL. The file is visible and accessible.

Step 23: Click on Google button. The webpage of Google will appear.

Step 24: Return to the Home page and click on Next button. This will redirect to the next.html page.
