Step 8: Now to create a connection between the instance (server) and the client, we need to use a third party application Bitvise SSH Client. After installing the app, the following Window appears.

Step 9: From the above dialog box, click on Client key manager. The following dialog box appears. Click on import.

Step 10: Now select the file containing the client key and click on open.

Step 11: The following appears, click on import.

Step 12: The client key is now visible. Close the following window.

Step 13: Now fill the details as follows and click on login.

Step 14: The following window appears, click on Accept and Save.

Step 15: The login process is successful. Now click on New terminal console from the below window.

Step 16: Type the command `sudo apt-get update` then press enter. Then wait till the process completes.

```
ubuntu@65.2.82.14622 - Bitvise xterm - ubuntu@ip-172-31-4-96 ~
Welcome to Ubuntu 24.04.1 LTS (GNU/Linux 6.8.0-1021-aws x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/pro

System information as of Sun Mar 16 07:31:44 UTC 2025

System load:  0.0          Processes:      105
Usage of /:   24.9% of 6.71GB   Users logged in:  0
Memory usage: 20%          IPv4 address for enX0: 172.31.4.96
Swap usage:   0%

Expanded Security Maintenance for Applications is not enabled.

0 updates can be applied immediately.

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status

The list of available updates is more than a week old.
To check for new updates run: sudo apt update

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

ubuntu@ip-172-31-4-96:~$ sudo apt-get update
```

Step 17: Type the command `sudo apt-get upgrade` and press enter. Type yes the hit enter. Then wait till the process completes.

```
ubuntu@ip-172-31-4-96:~$ sudo apt-get upgrade
137 upgraded, 0 newly installed, 0 to remove and 3 not upgraded.
Need to get 113 MB of archives.
After this operation, 3434 kB of additional disk space will be used.
Do you want to continue? [Y/n] y
```

Step 18: Type the command `sudo apt-get install nginx` and press enter. Type yes the hit enter. Then wait till the process completes.

```
ubuntu@ip-172-31-4-96:~$ sudo apt-get install nginx
0 upgraded, 2 newly installed, 0 to remove and 3 not upgraded.
Need to get 552 kB of archives.
After this operation, 1596 kB of additional disk space will be used.
Do you want to continue? [Y/n] y
```

Step 19: Now check whether the server is connected by pasting the ipv4 address of your created instance into the web browser. The following page denotes successful server connection.

Step 20: Now open Bitvise again, click on New SFTP window.

Step 22: Now set the path of the Remote files as shown in the picture below and minimize the window.

Step 23: Open the terminal again and type the following command.

```
ubuntu@ip-172-31-4-96:~$ cd ..
ubuntu@ip-172-31-4-96:~/home$ cd ..
ubuntu@ip-172-31-4-96:/$ cd var/www
ubuntu@ip-172-31-4-96:/var/www$ sudo chmod 777 html
```

Step 24: Now open SFTP window of Bitvise again and drag the home.html, home.css and next.html files from local files to remote files. Rename the home.html file as index.html

Step 21: The following page appears.

Step 25: Now reload the web browser where the server was running and the web page is visible to the client side as well. This denotes that the website hosting is successful.

Step 26: Now click on Google, it will redirect to the web page of google.

Step 27: Go to the home page again and click on Next. It will redirect to the next.html page.
